Web Hosting and DNS & Domain Registration

What is Web Hosting?

A **web hosting service** is a type of Internet hosting service that allows individuals and organizations to make their website accessible via the World Wide Web. Web hosts are companies that provide space on a server owned or leased for use by clients, as well as providing Internet connectivity, typically in a data center. Web hosts can also provide data center space and connectivity to the Internet for other servers located in their data center, called colocation.

Standard Level - Basic Web Hosting

\$10 per month

\$100 per year: *includes 2 months of free service*

Advanced Level - Includes 1 hour of website updates per month

\$30 per month

\$300 per year: *includes 2 months of free service*

What are Domains and why register for them?

Computers communicate by using number, called IP addresses, to contact each other, much like you use a phone number to dial a specific person's phone. Domain names on the Internet are much like entries in the phone book. The phone book tells people looking for a business what the entries are just as a domain tells people (i.e. their computers) that a domain is hosted on the server.

Without a domain, you would have to tell your customers that your site is located at a temporary URL such as 123.456.789.123/~mysite instead of using a domain name such as mysite.com, making your site unprofessional and impractical.

Domain and DNS Registration

\$15 per year for 1 URL registration
